

ABSTRACT

A method and system for reprinting a portion of at least one document is disclosed.

The document(s) include a plurality of pages. The method and system include querying a user regarding the portion of the document(s) that includes at least one erroneous page. The
5 method and system also include instructing the user on loading at least a remaining portion of the document(s) or receiving an indication from the user as to how at least the remaining portion of the document(s) are loaded. The method and system also include automatically reprinting the portion of the document(s) to provide at least one reprinted page that is to replace the erroneous page(s). The method and system also include automatically merging
10 the at least one reprinted page with the remaining portion of the document(s).
